## 1 Test1

This should be written in latex, and will not be put in the html version.

### 1.1 test2

We shall first prove the following.

Lemma (Eigenspace orthogonality)

For any symmetric matrix  $M$ , and any two eigenvalues  $\lambda \neq \lambda'$ , the eigenvectors for  $\lambda$  are orthogonal to the eigenvectors for  $\lambda'$ .

It can then be used to prove the following.

Theorem (Diagonalisation)

Any symmetric matrix can be diagonalised in an orthogonal basis.

**Theorem 1.1.** *Esta es una prueba*

$$\left(\int_0^{\mathbb{R}}\right)$$

*Proof.* Hola
